

1 alignr widget

- Click and drag on the name to move the menu
- First button toggles the grid on or off and displays current state
- second button opens configuration UI

2 configuration menu

- expands when the cog is clicked
- adapts based on it's position, so that it always fits on screen
- will have to adapt to different resolutions (i.e. wireframes for mobile, tablet are required)

3 resolution tabs

- allows for separate settings for each resolution

4 code snippet

- opens a light-box-like alert with the code for embedding the alignr plugin with the current settings.
