

- 1 alignr widget
  - Click and drag on the name to move the menu
  - First button toggles the grid on or off and displays current state
  - second button opens configuration UI
- configuration menu
  - expands when the cog is clicked
  - adapts based on it's position, so that it always fits on screen
  - will have to adapt to different resolutions (i.e. wireframes for mobile, tablet are required)
- 3 resolution tabs
  - allows for separate settings for each resolution
- 4 code snippet
  - opens a light-box-like alert with the code for embedding the alignr plugin with the current settings.
